

# HYDRAULIC COMPENSATOR IN PAINTED STEEL

For applications on centralized and underfloor heating systems

## Product informations

Hydraulic compensator designed to hydraulically separate the generation circuit from the circuit to be used, when the two circuits are characterized by different water flow requirements; moreover, the compensator is necessary when the anti-condensation function is required, since thanks to the mixing between delivery and return, the return temperature rises before entering the boiler.

## Product features

- creates a vertical path at low speed in order to facilitate the separation of the air upwards and the accumulation of any impurities or sludge in the lower part, to facilitate discharge
- the position of the bindings has been carefully studied to favor the previously mentioned functions
- available on request polyurethane insulation

## Technical Features

<i>MAXIMUM TEMPERATURE OF THE FLUID</i>	90°C
<i>MINIMUM TEMPERATURE OF THE FLUID</i>	5°C
<i>MAXIMUM FLUID PRESSURE</i>	5 BAR
<i>MATERIAL</i>	EN10255 CARBON STEEL
